Yu Fan Mei
Introduction to Proof and Problem Solving

December 6, 2024

Problem 1. Show that
$$C((0,1]) = C((0,1))$$
by showing that the function
$$f(x) = \begin{cases} x & \text{if } x \neq \frac{1}{n} \text{ for any } n \in \mathbb{Z}^+ \\ \frac{1}{n+1} & \text{if } x = \frac{1}{n} \text{ for some } n \in \mathbb{Z}^+ \end{cases}$$
is one-to-one from $(0,1]$ onto $(0,1)$. It might help to graph the function.

Proof. In order to prove these two sets have the same cardinality, we will prove that the function $f : (0,1] \to (0,1)$ is one-to-one and onto. We will first use a proof by contraposition to prove that f is one-to-one. Let x_1, x_2 be any two real numbers within $(0,1]$ such that $f(x_1) = f(x_2)$. Let's consider cases:

Case 1: Suppose $x_1, x_2 \neq 1/n$ for any $n \in \mathbb{Z}$. By definition, $f(x_1) = f(x_2)$, and it then follows that $x_1 = x_2$.

Case 2: Suppose there exists positive integers n_1, n_2 such that $x_1 = 1/n_1$ and $x_2 = 1/n_2$. Since $f(x_1) = f(x_2)$, it follows that
$$\frac{1}{n_1+1} = \frac{1}{n_2+1}.$$

This means that their reciprocals are also equivalent

□

While working on this proof, I received no external assistance aside from advice from Professor Mehmetaj.
